Abstract not available for JP2003503338T

Abstract of corresponding document: **WO0100171**

According to the present invention there is provided a cosmetic composition comprising: (a) at least one readily biodegradable quaternary ammonium agent; and (b) at least 5 %, by weight, of humectant. The compositions of the present invention give good skin care benefits, such as good moisturisation, good hydration, good skin feel, good skin softness and/or good skin smoothness, with low levels of negatives such as greasiness, stickiness or tack. In addition, such compositions are readily degraded once used and are consequently kinder to the environment.
